

Accessories

C-819.10 Joystick

The C-819.10 joystick can be used to operate the C-844 and C-842 DC-motor-controllers via the PC game port. The C-819.10 joystick is also part of the C-842.JS package for operation of up to two C-842 motor-controller cards (up to 8 axes) through the standard PC game port (see page 9-16 for details).

C-819.10 analog joystick

C-815.38 motor cable

C-815.34 RS-232 cable

Notes

All PI micropositioners come with the appropriate motor cables. The cables shown here are available as replacements or can be used as extension cables.
